Waiver No. _____

Town of Harpswell Multi-Site Application for Pesticide Use Waivers

The Outdoor Pesticides Control and Fertilizer Use Ordinance provides that the Conservation Commission may grant a waiver for the use of pesticides that are otherwise restricted if certain conditions are met. An application for a pesticide use waiver must be completed by an applicator licensed by the Maine Pesticide Control Board. A licensed applicator may use this form to apply for waivers for *multiple properties* if all of the following conditions are met:

- The pesticide and concentration proposed to be used is the same for all properties
- The method of application will be the same for all properties
- The primary reason for requesting the waivers is the same for all properties – either an immediate threat to human health OR an immediate threat of substantial property damage

If those conditions are all met, complete the following information on this application form and provide the requested information for each property or site on the attached spreadsheet.

1. Applicator requesting the waivers: William Buckley

2. Pesticide and concentration proposed to be used: ArborMectin: EPA# 83100-35-83979

3. Provide the following information about the pesticide(s) proposed to be used:

A. How long does it take for the pesticide to break down in the soil and in the ocean? _____

Relatively immobile in environment. High degree of sorption to soil particles. Expected to remain bound to sediment's suspended particles in water.

B. How toxic is the pesticide to marine crustaceans, marine creatures, and land creatures?

Highly toxic to fish, mammals, and aquatic vertebrates.

C. If the pesticide is applied via injection, will residual levels be present in leaves or needles when they drop? Yes.

4. Proposed application method: Trunk/root flare injection.

5. The Conservation Commission must find that the following criteria are met to approve a pesticide use waiver. Please complete the following:

A. Describe why the control methods allowed in the ordinance are not adequate to address the threat – be specific: Trees are found within 25 feet of the water.

B. Describe why the proposed approach for controlling the pest presents the least risk to the marine environment: State-approved treatment method preferred when working close to water due to
the absence of runoff: injections utilize a closed system.

3. Describe the measures that will be undertaken to limit the potential adverse impacts on the marine environment: We will strictly use this preferred method of treatment.
